

THINK GREEN THINK GIBCA

The global impact of increasing pollution and environmental destruction has made it crucial for companies to take ownership and incorporate all methods possible for creating environmentally-friendly products. At Gibca, we recognize being aware and taking care of the environment is a global responsibility. We are committed to taking numerous measures to minimize our impact on the physical environment. For example, GIBCA products are packed in wooden pallets reused from salvaged materials and new packaging materials. All packaging is less than 1% weight of the product. Hence, we strive to reduce the amount of waste we produce as a company.

Environmental conservation effort is an important part of all business operations and practices. We strive to improve and enhance our practices in all possible methods to prevent pollution, protect the environment, boost economic prosperity and improve the health and lifestyle of our community. We set business goals and objectives that help us support our commitment to creating environment-friendly products by using sustainable resources.

As mentioned in our Mission Statement, we believe all built environments and their occupants can benefit from intelligent sustainable design irrespective of acquired certifications.

*Gibca products are one component of the whole global certification process; therefore, they can't be individually certified. Depending on the partitions and the organization of the installation site, credits granted for the project can be impacted.
